

Crude Palm Oil Inventory System

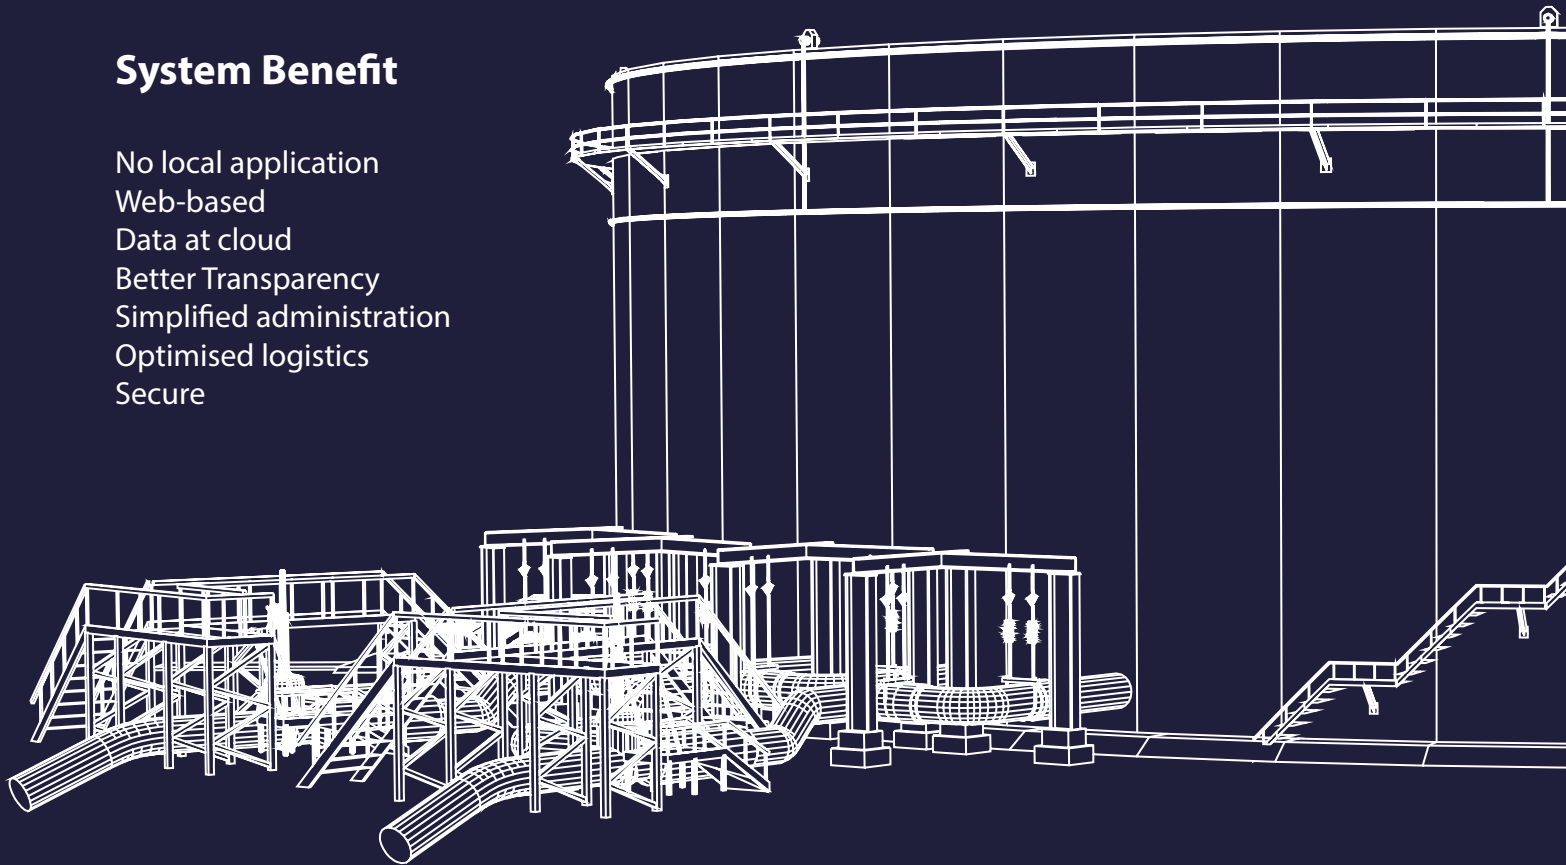

Inventory visualization helps to ensure that ample replenishment are delivered at the right time.

Increased security of supply
Better planning capabilities

System Benefit

- No local application
- Web-based
- Data at cloud
- Better Transparency
- Simplified administration
- Optimised logistics
- Secure

Gussmann Hosted Cloud Solution of Remote & Inventory Monitoring

Gussmann Inventory system is a web-based software for data acquisition and visualisation of level data (e.g in storage tanks and silos).

The service is suitable for level monitoring within a company and for Vendor managed inventory (VMI) applications.

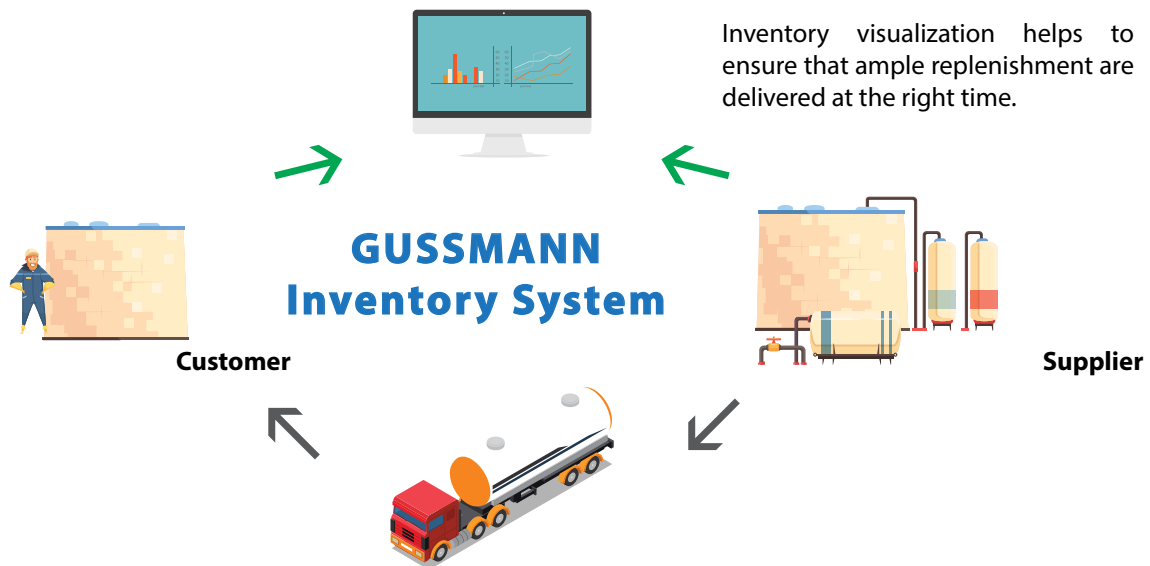

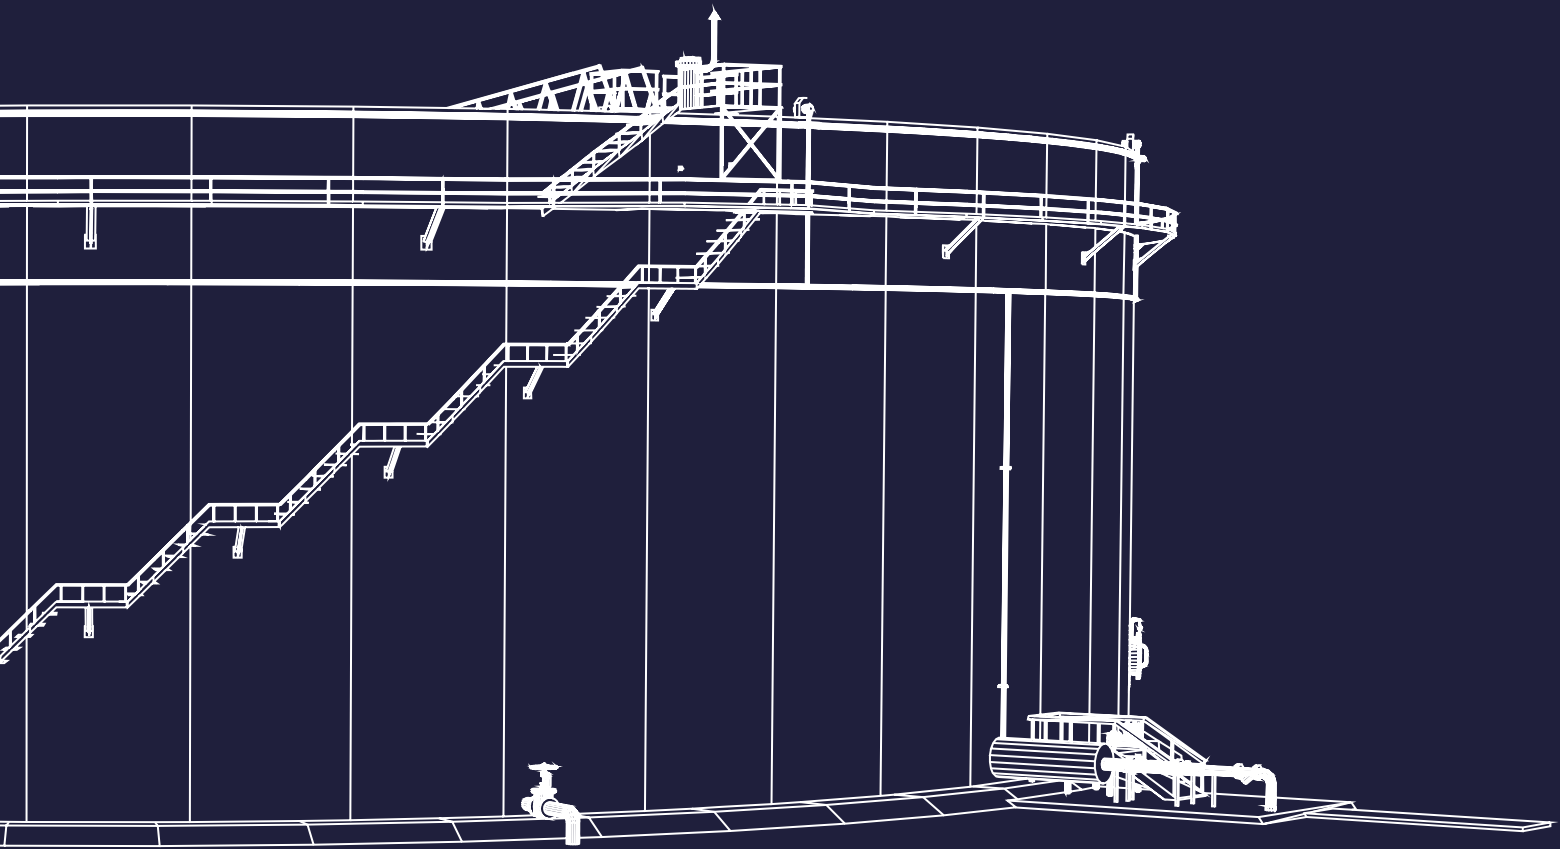

Increased security of supply

With the web-based platform GUSSMANN Inventory System, users can keep an eye on their inventories at all times – locally and globally.

The automated flow of information within the company or between partner companies creates transparency early on for the supplier – and security of supply for the purchaser. GUSSMANN Inventory System makes a strong link out of something that has often been seen as a critical weakness in the supply chain.

Better planning capabilities

GUSSMANN Inventory System reports supply needs automatically and on time. The software draws not only on current measurement data from the inventory, but also on historical data gathered from consumption trends. Monitoring and planning tools support optimized inventory demand analysis and delivery scheduling.

Advantages for the supplier

- Quick access to current and historical customer consumption data
- Cost-effective production and inventory management in own facilities
- Increased efficiency of planning processes
- Cost savings through optimized logistics
- Improved customer relationships and long-term customer loyalty

Advantages for the customer

- Security of supply: no more "out of stock" situations and costly rush orders
- Avoidance of production stoppages
- Cost savings through reduced administrative work
- Higher efficiency thanks to automation
- Concentration on core business

About Silo Inventory System

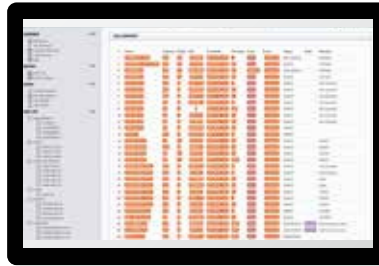

Available Features:

• Dashboard • Site Summary • Integrated Summary • Site Summary • Map • Daily Log • Event Log Book • Change Password • Silo Management • Alert Sorting • User Profile

Dashboard

Provide at-a-glance view on overall system installed at numerous locations with latest status.

Silo Summary

Provide latest information on all the system installed in table form.

Integrated Summary

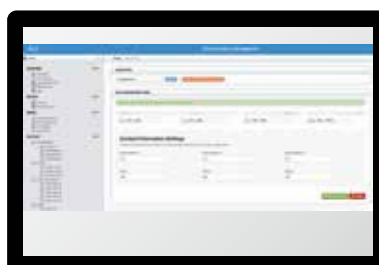

Integrate Fleet management system with the delivery order, dispense from the silo.

Scheduled setting on Inventory in/out date and volume.

Site Summary

Provide details information on each silo, eg. Site photo, location, Remaining storage, historical trending.

Alert Setting

User able to customize the alert threshold remotely by using Gussmann Inventory System Key personnel or Person in charge will receive the alert by email/SMS.

Event Log Book

To record all historical events happen eg. Low storage. Storage up to 5 years data
